

Tuckerton Road Drill Site Project

MUD 500 has been working with its landscape architect, KGA DeForest, on the design for improvements to the drill site located at the corner of Tuckerton Road and Greenhouse Road. Before work can begin on the improvements, the well located on the drill site must be plugged and abandoned. Over the next few weeks, you may notice the well operator undertaking the work necessary to decommission the well. Please stay clear of the area in order to allow the operator to safely complete their work.
